

UNDERSTANDING THE TYPES OF REAL ESTATE TOKENIZATION

What is Real Estate Tokenization

Tokenization involves converting real estate assets into digital tokens using blockchain technology. These tokens represent fractional ownership, allowing easier trade and investment.

Type 1: Equity Tokenization

Ownership of real estate is divided into tokens that represent shares of a property. Investors hold digital tokens that reflect their share in the property. Similar to owning shares in a corporation, with rights to rental income and property appreciation.

Benefits:

- Direct ownership
- Potential for rental income
- Asset appreciation

Type 2: Debt Tokenization

Tokens represent a share of the debt owed on a property.

How it Works:

Developers issue tokens to investors as loans. The tokens are backed by the property, and investors earn interest payments.

Benefits:

- Lower risk than equity investments
- Fixed interest payments from loan repayment

Type 3: Utility Tokenization

Tokens are used to access specific real estate services, such as short-term rentals, co-working spaces, or memberships.

How it Works:

Tokens represent access rights to services or properties, enabling holders to utilize them without traditional payments.

Benefits:

- Tokenized payments for services
- Efficient management of real estate services

Type 4: Hybrid Tokenization

Combines both equity and debt tokens to provide a diversified investment approach.

Investors receive tokens that represent both ownership (equity) and a stake in debt repayment (debt).

Diversified investment with potential for both rental income and interest payments.

Mitigates risk by blending equity and debt exposure.

Example:

Token holders in a real estate development receive income from property sales and loan interest.

Future of Real Estate Investment

Real estate tokenization democratizes property investment, opening the market to smaller investors.

Increased liquidity will make real estate assets more attractive in the digital economy.

Tokenization enables global participation, unlocking capital flows from international investors.
