# Driving Consistency: Power Platform Environment Groups in Action

In response to the expanding usage of Microsoft Power Platform, environment groups and rules offer streamlined governance for enhanced control and consistency across multiple environments.

## Efficient Governance

**Custom Rules**
Establish governance policies with customizable rules for consistency and control.

**Uniform Capabilities**
Apply key capabilities consistently across all group environments.

**Automated Compliance**
Environments automatically adhere to group rules upon joining, ensuring alignment with standards.

## Key Points

**Preview Feature**
Environment groups and rules are in preview for feedback, not intended for production.

**Managed Environments**
Premium licenses are required for all environments within a group.

**Developer Plan**
Managed environments are not included in the free developer plan.

## Simplified Development with Default Routing

**Automatic Assignment**
New makers are directed to personal developer environments automatically.
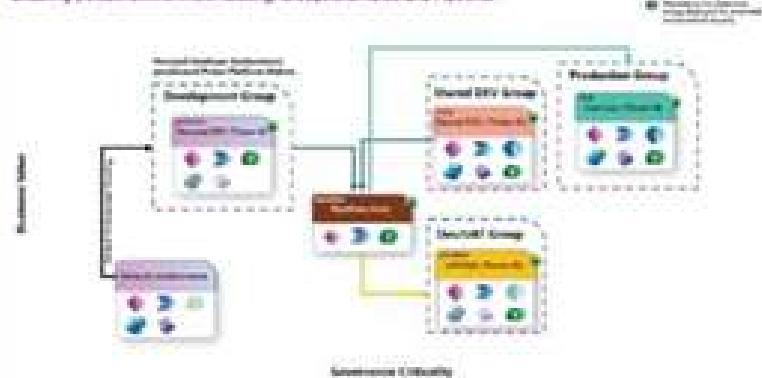

**Preloaded Settings**
Environments come with essential admin settings preloaded for easier adoption.

### Tenant Strategy
Enabling Default Environment Routing, Groups and Rules, and Pipelines
