

INDUSTRIAL SILICONE FOAM

INTRODUCTION

Industrial silicone foam is a versatile material widely used for sealing, insulation, cushioning, and gasketing in various industries, including automotive, aerospace, electronics, and construction. Known for its excellent resistance to extreme temperatures, UV exposure, moisture, and chemicals, it performs reliably in harsh environments. Silicone foam is lightweight, flexible, and available in different densities and thicknesses to suit specific applications.

It offers superior compression set resistance, ensuring long-term durability and performance. Whether used in thermal insulation or vibration damping, industrial silicone foam is an ideal choice for applications that demand high performance, longevity, and environmental resistance in challenging conditions.
